About the centre

At the Newcastle Surgical Training Centre we are committed to giving you the best possible opportunities in education and training by offering a wide range of multidisciplinary courses to meet your every need. Our highly professional clinicians are here to train and support you every step of the way. Combining didactic teaching and practical procedures with leading edge technology, we offer first rate cadaveric training and continuing professional development in a purpose built facility. We also carry out pioneering research into new techniques and ensuring that you receive the very best surgical training available in the UK, both for today and in the future.

The Newcastle Surgical Training Centre is led by the co-directorship of Professor Alan Horgan and Professor David Deehan. The centre delivers over 150 advanced training courses from regional, national and international surgeons representing multi specialties. Collaboration with national and international faculty drives a greater understanding of surgical techniques delivering improved patient care.

Course overview

This intensive, one day course is designed for gastroenterology trainees (ST4-ST6) and surgical trainees (ST4-ST6) who wish to advance their skills in upper and lower GI therapeutics through a series of practical hands on workshops using state of the art training models and simulators.

Aims of the course

The objectives of the course will be achieved through a series of skills stations that trainees will rotate through in small groups during the day with their trainer and be facilitated by members of the course faculty.

During the day trainees will have the opportunity to work with a variety of training resources including a state of the art simulator, fresh frozen cadavers and tissue models.

Target Audience

ST4 – ST6

Course Learning Objectives

To familiarize trainees with correct approach and equipment used to perform polypectomy

To develop trainees' knowledge and skills in the correct application of diathermy in polypectomy

To practice polypectomy technique on a simulator and on a tissue model (cadaveric)

To develop a systematic approach to endoscopic therapies of upper GI bleeding

To practice therapies for upper GI bleeding on a simulator and tissue model
